

Playwright UI Automation Test Report

Project Name: UI Automation Testing with Playwright

Participant: Shahbaz Ahmad

Date: 21-07-2026

Branch: capstone/307424-shahbaz-ahmad

Assessment: Retailmart Playwright UI Automation

Question NO 1

Objective

The objective of this automation project is to validate the core functionality of the application using Playwright with website

<https://chess-agent-83252463.figma.site/>

The automated test suite verifies critical user workflows and ensures that the application behaves as expected across supported browsers.

The framework is designed to provide reliable, maintainable, and scalable UI automation.

Github Link

My Branch name is **capstone/307424-shahbaz-ahmad** and link is

[RajaVUst/SDET-2 at capstone/307424-shahbaz-ahmad](#)

Environment Setup

- Tools: Node.js, Playwright Test Runner, TypeScript/JavaScript, VS Code

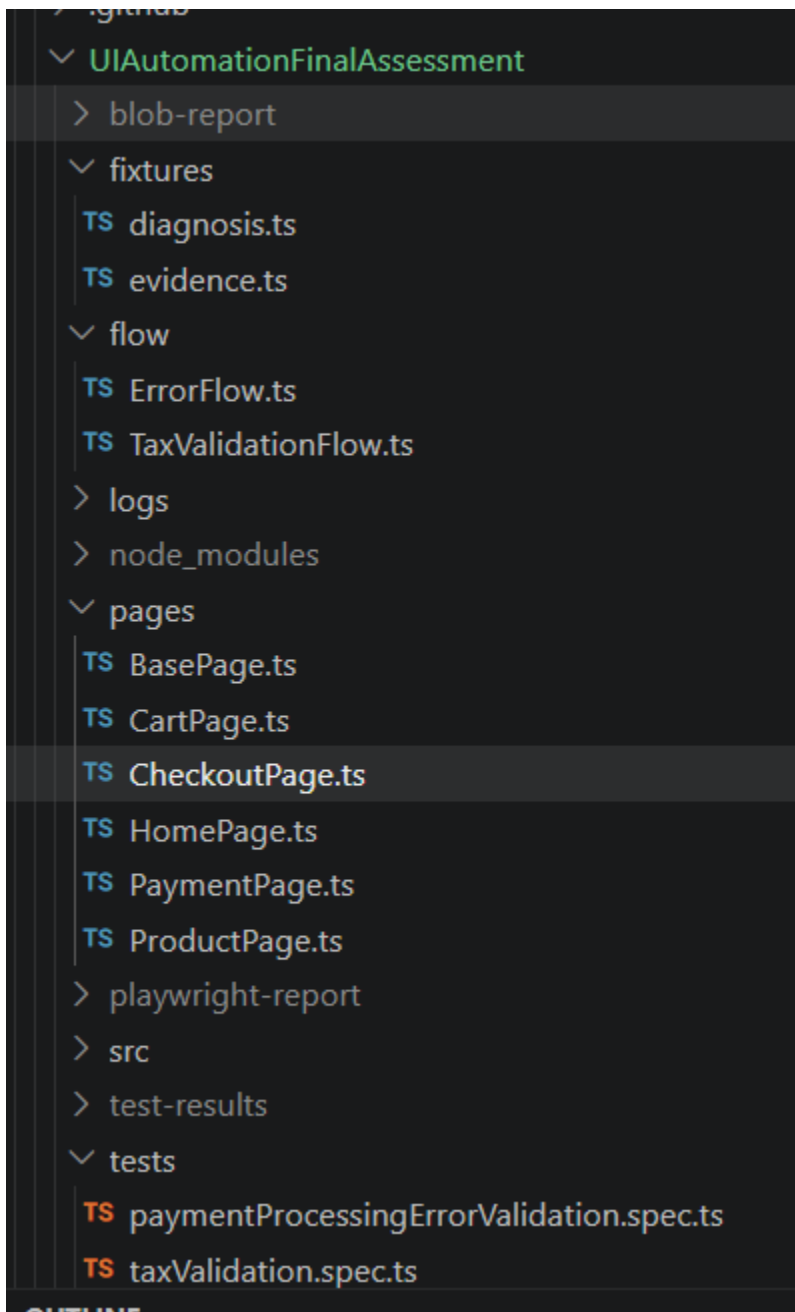

Install Commands:

- `npm init playwright@latest`
- `npm install dotenv`
- `npm install winston`
- `npx playwright install`
- Reporting Tools: HTML Reporter, Allure

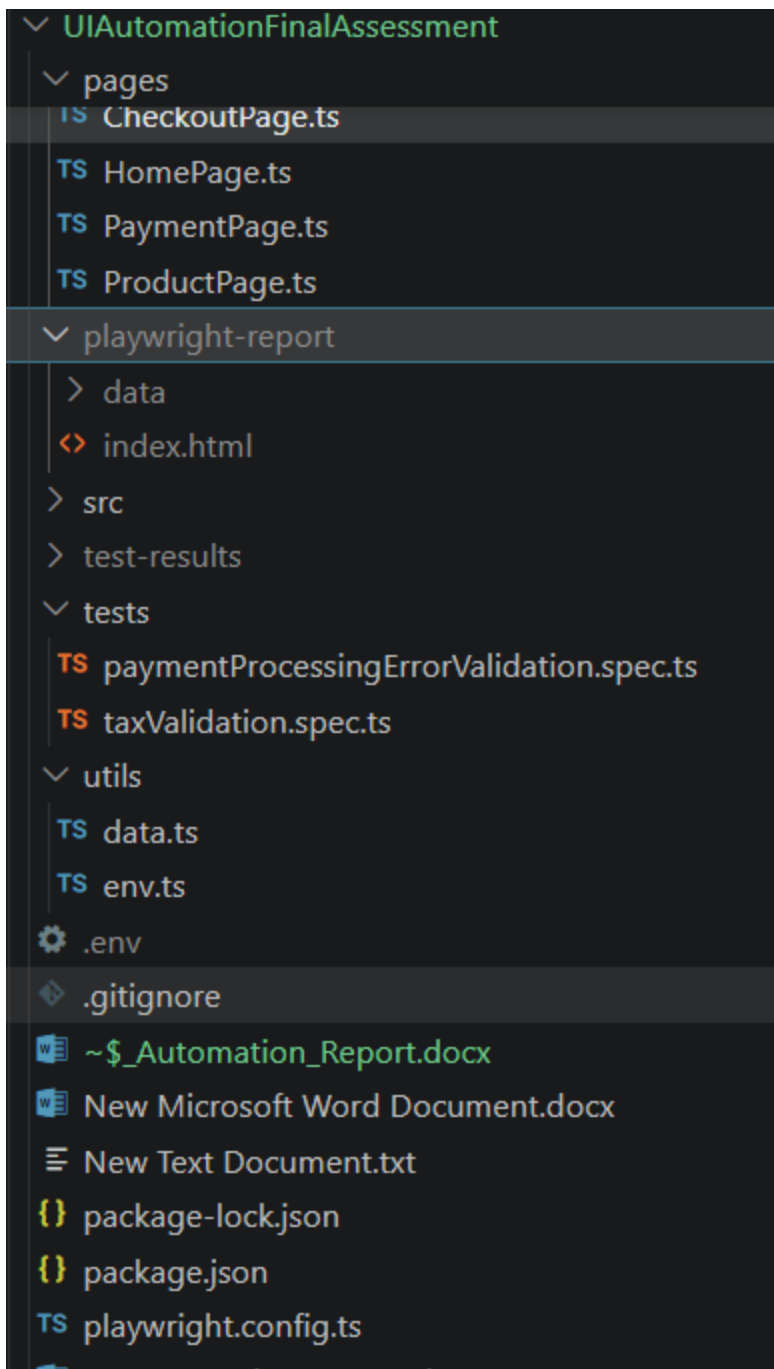

Workflow

1. Start test execution
2. Load fixtures (page,test,expect)
3. Navigate using `page.goto(https://chess-agent-83252463.figma.site/)`
4. Use Page Object methods
5. Execute assertions
6. Generate report

Folder Structure

OUTLINE

Page Object Model

Each UI page is represented as a class containing locators and methods. This improves maintainability and avoids duplication. I create HomePage for visible home page and search negative and positive actions.

Fixtures Usage

Fixtures are used to provide reusable resources like home page, session. So that can access home page method and we can use POM Homepage in test easily assert all the things by using home

Code – Tax validation

Test Case ID Description		Status
TC_001	Verify tax validation	Passed
TC_002	Verify payment error	Passed

Commands

- `npx playwright test --headed`
- `npx playwright show-report`
- `npx playwright test`

Result Evidence

Attach screenshots, videos, and trace files generated during execution.

In cmd run the command and it run all 2 test pass

Execution Timeline – tax validation with flow

(index)	Level	Timestamp	Message
0	'INFO'	'12:09:18'	'Test Started'
1	'INFO'	'12:09:18'	'Step: home page '
2	'INFO'	'12:09:18'	'Navigating to https://chess-agent-83252463.figma.site/'
3	'INFO'	'12:09:19'	'Screenshot captured: home-page-loaded'
4	'INFO'	'12:09:19'	'Step: cloth category '
5	'INFO'	'12:09:19'	'step: product page open'
6	'INFO'	'12:09:19'	'Screenshot captured: product-page-loaded'
7	'INFO'	'12:09:19'	'step: add to cart'
8	'INFO'	'12:09:20'	'step: go to cart'
9	'INFO'	'12:09:20'	'Screenshot captured: product-page-loaded'
10	'INFO'	'12:09:20'	'step: tax validation in cart part'
11	'INFO'	'12:09:20'	'Test passed'

1 passed (5.9s)

Execution Timeline – payment error validation with error flow

(index)	Level	Timestamp	Message
0	'INFO'	'13:09:47'	'Test Started'
1	'INFO'	'13:09:47'	'Step: home page '
2	'INFO'	'13:09:47'	'Navigating to https://chess-agent-83252463.figma.site/'
3	'INFO'	'13:09:48'	'Screenshot captured: home-page-loaded'
4	'INFO'	'13:09:48'	'Step: cloth category '
5	'INFO'	'13:09:48'	'step: product page open'
6	'INFO'	'13:09:48'	'Screenshot captured: product-page-loaded'
7	'INFO'	'13:09:48'	'step: add to cart'
8	'INFO'	'13:09:48'	'step: go to cart'
9	'INFO'	'13:09:49'	'Screenshot captured: product-page-loaded'
10	'INFO'	'13:09:49'	'step: tax validation in cart part'
11	'INFO'	'13:09:49'	'Filling: enter name = "Shah"'
12	'INFO'	'13:09:49'	'Filling: enter email = "*****"'
13	'INFO'	'13:09:49'	'Filling: enter phone number = "*****"'
14	'INFO'	'13:09:49'	'Filling: enter street = "Rajasan"'
15	'INFO'	'13:09:49'	'Filling: enter city = "AL"'
16	'INFO'	'13:09:49'	'Selecting: select state = "Kerala"'

Limitations

Dependent on UI stability, network speed, and environment configuration and number of user so ,we only run here in headed mode so that url can easily fetch

Conclusion

Playwright framework ensures scalable, maintainable, and fast UI automation using modern testing practices.

Today I did home page verification ,search text working with positive search like product list is available and negative search like not found and empty search;
